

# Web enabled meters and controllers

The recently launched iSeries from Omega is believed to be the world's first web enabled range of controllers, panel meters, transmitters and signal conditioners.

The embedded internet option enables the iSeries range of instruments to connect to an Ethernet network with a standard RJ-45 connector. Once connected, the devices are then able to serve web pages over an Ethernet LAN or the internet, making it possible to monitor and control a process through a web browser from anywhere in the world.
