## Web-enabled instruments allow remote control

The Newport iSeries of Web-enabled controllers, panel meters, transmitters, and signal conditioners connect directly to an Ethernet network with a standard RJ-45 connector, and can send and receive data in standard TCP/IP packets. They are full stand-alone Internet appliances that make it possible to control a process via a Web browser from any remote location. With no computer needed, they can also send email in case of alarm conditions—Newport Electronics, Inc., 2229 S. Yale Street, Santa Ana, CA 92704-4401, 800-NEWPORT.
