#### ***Web-enabled controllers, panel meters, transmitters, conditioners***

Newport has announced web-enabled controllers, panel meters, transmitters and signal conditioners. The iSeries devices connect directly to an Ethernet network with an RJ-45 connector and can send/receive data in TCP/IP packets. The devices

serve web pages over an Ethernet LAN or over the Internet, making it possible to monitor and control a process through a web browser. Apart from the web server feature, the iSeries also works with conventional data acquisition and control programs, as well as Visual Basic and Excel.
