 An ISA Publication

Web-Enabled Devices

Newport's Web-enabled controllers, panel meters, transmitters, and signal conditioners connect directly to an Ethernet network with a standard RJ-45 connector and send and receive data in standard TCP/IP packets. The iSeries serves Web pages over an Ethernet LAN or the Internet, which makes it possible to monitor and control a process through a Web browser from anywhere. Web pages are customized, and devices are password protected. The series requires no special software to view the data or supervise the controller.
