Presenting the 2001 Award Winners

New Equipment Digest is proud to announce the third annual "Excellence in Innovation" award winners. This prestigious, industry-wide program honors and recognizes the most unique and innovative products and equipment introduced during the past year. A panel of business press editors served as preliminary judges to choose the finalists from 12 product categories. These categories include assembly & fastening, computers & peripherals, material handling,

plant maintenance products, motion control/fluid power, metalworking equipment, electrical & electronics, plant maintenance equipment, instruments & controls, software, safety & environment, and process equipment. Our readers then voted on the finalists that appeared in NED's July issue. On the following pages you will see a showcase of the winning products and equipment. We thank everyone involved in the awards program for their assistance.

Newport Electronics, Inc.

■ Web-Enabled Devices

iSeries controllers, panel meters, transmitters, and signal conditioners feature an embedded Web Server. They connect directly to the Ethernet and transmit data in standard TCP/IP protocol.
