Web-Enabled Devices Access from Anywhere

iSeries controllers, panel meters, transmitters, and signal conditioners feature an embedded Web server. They connect directly to the Ethernet and transmit data in standard TCP/IP protocol. You can monitor and control your process through a Web browser from anywhere in the facility or anywhere in the world, and no computer is needed. Devices (meter or controller) connect directly to the Ethernet Network, not to a serial port in a server or master/slave configuration.
