

Data on the net

Embedded Internet option enables Omega's ISeries range of controllers, panel meters, transmitters and signal conditioners to connect to an Ethernet network with a standard RJ-45 connector. Once connected, the devices can then serve web pages over an Ethernet LAN or even over the Internet, making it possible to monitor and control a process through a browser from anywhere in the world. They can even send an e-mail to an operator alerting them to an alarm or updating the status of a process.
